

(a) obc0, $N = 16$: the gaps in the W_{108} comb are the non-Fibonacci σ

(b) pbc: consecutive N populate DISJOINT sizes ($N \equiv \text{sopfr} + \Omega$)

(c) W_{156}/W_{198} : $n_N(\sigma) \approx P(\sigma)(N/2)^{\Omega+1}/(\Omega+1)!$

(d) W_{108}/W_{201} : $n_N(\sigma) \approx A(\sigma)N^m\varphi^N$
