

W156 (llvi), obc0, $N = 10$: transition-matrix support, 6930 nonzeros in a 1024×1024 matrix (0.66% dense). Off-block nonzeros: 0.

computational basis: banded and self-similar,
but not block-diagonal

sorted by weak component: 144 blocks,
largest 20, every nonzero inside one
