

W156 (llvi), obc0,  $N = 10$ : transition-matrix support, 6930 nonzeros in a  $1024 \times 1024$  matrix (0.66% dense). Off-block nonzeros: 0.

computational basis: banded and self-similar,  
but not block-diagonal

sorted by weak component: 144 blocks,  
largest 20, every nonzero inside one
